TENNIS MATCH ANALYSIS

Comments / Explanations:

Forced Errors vs Unforced Errors: There will be differences in opinion on what was a Forced Error and what was an Unforced Error. The general rule that is used for these statistics is that any offensive (or neutral) shot unsuccessfully returned is an unforced error. If a defensive shot could not be returned, it is a forced error. The same rules apply to both players.

Set-Up Points: This concept is from Brad Gilbert's book, *Winning Ugly*. Anytime a player has a "set-up for a game winning point", this is a "set-up" point. For example, deuce is a set-up point for both players. 30-15 is a set-up point for the server.

On Pressure Points: These numbers reflect the last stroke that a player took on a pressure point. In this case, a pressure point include breakpoints (with opponent serving) and hold points (he/she was serving to hold serve).

Graphs: The server's score is listed first. If the U.S. player (or primary player being reviewed) earns a point, the line goes upward, likewise the line goes down if he/she loses a point. These charts are a variation of Bob Love's charts.

Returns: Return winners (or forced errors) include both regular returns and return passing shots.

Directional Changes: Many wins (and errors) occur with directional changes to the ball. I/S refers to inside directional changes (i.e. running around a backhand and hitting a forehand down the line). O/S refers to an outside directional change (i.e. hitting a forehand down the line after hitting several crosscourt forehands).

Data Errors: While care was used in observing the match and entering this data, there could be errors
